

Secur Punch is a manual writing device for marking bank cheques and important documents. It is based on the use of a set of punches that stamp several words on the paper, depending on the user's requirements:

PAID

NON-NEGOTIABLE

CANCELLED

DESPATCHED

as well as other words depending on the user's requirements.

It is rather compact in size, easy to handle and use, just like a normal stapler.

It is also available in a wide range of colours.

CHEQUES: BETTER NON-NEGOTIABLE. With the Euro, we can use our cheques abroad. A great advantage, but make sure you always write "**NON-NEGOTIABLE**".

The banks of Euroland will pay the holder the amount indicated in figures, which is easier to tamper with, without checking if it matches the amount written in words, usually in the language used in the country of the bank issuing the cheque (with the obvious problems of understanding for those who do not speak all the European languages).

In the event of fraud against us, an "endorsed" cheque will be much more difficult to contest.
